

Image metadata return

2 changed occurrences · 5 eligible occurrences · 0 excluded objects

This review records metadata edits only. It does not evaluate whether descriptions are meaningful or establish accessibility compliance, reading order, native Word behavior or screen-reader results. A SHA-256 digest identifies bytes; it does not authenticate a reviewer.

Intake icon

word/document.xml · element path 0/3/1/0/0/1
Occurrence key 4aab5519e1292af48bd33c78cacf664fe9e9c9cc1320cd0ed7bf29642014cf6a

Field	Before	After
Description	String "Status icon"	String "Intake ready & checked"
Title	String "Status"	String "Status"

Release icon

word/document.xml · element path 0/5/1/0/0/1
Occurrence key 6cc960b39c31b61fa6cf5b12546c79c5dd03a26be7afb113d8400bc46f7afa37

Field	Before	After
Description	String "Status icon"	String "Release pending"
Title	String "Status"	Attribute absent

Excluded objects

Part / path	Reason
None observed within the scanned stories.	

Unscanned parts

No additional known story parts were found outside the scanned scope.

The main document and reachable headers and footers were scanned. Unscanned parts were preserved without image-metadata inspection.

Preservation evidence

22 member payloads retained identical bytes. Changed XML was patched only at the selected docPr title/descr attributes. Other ZIP local member records were copied unchanged; central offsets may change. No-op whole-file equality: false.
